

AVManager™

Protection against viruses, spyware and adware

AVM

AVManager™ delivers a daily anti-virus update to PCs on vessels at sea, providing for the peace of mind that comes with knowing that all of a vessel's essential data and information is protected. Free updates and upgrades for new releases are available and there are no hidden costs.

In addition to the daily update, a CD is sent out every three months, giving a full engine update.

Benefits

AVManager™ is a powerful anti-virus protection which offers complete defence against viruses, spyware, trojans, adware and potentially unwanted applications (PUAs) for both Windows and Mac file servers, computers and laptops.

Behavioural Genotype Protection identifies malicious code and blocks it before execution, giving the benefits of a Host Intrusion Prevention System (HIPS).

High performance scanning can be performed on access, on demand and automatically at scheduled times. Decision Caching technology means only those files that have changed are re-scanned.

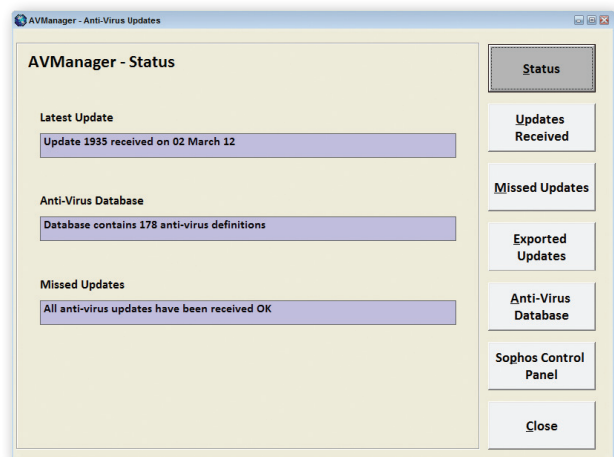

Computers can be completely disinfected in a single operation. Unwanted registry entries, running processes and even files on disk are removed.

Remove the cost of CD delivery from the office ensuring the anti-virus system is kept current, protecting key navigational data.

Key Features

- Complete protection against viruses, spyware and adware.
- Protect data – stay protected.
- Daily update delivery.
- Single/multi-user option.
- Available through quarterly or annual subscription.

Safe data, giving peace of mind:
daily updates ensuring current protection
at all times. Intelligent anti-virus software
with 24/7 technical support from
ChartCo experts.
